VISION MEMO · V1.0
2026 · CONFIDENTIAL

THE SHADOW PROTOCOL

Protection that moves *before you do.*

*The first autonomous safety
architecture.*

A biometric cuff that reads the body's fear signature and mobilizes the Legion — without a touch, without a thought, without a button. This document is a foundational case for infrastructure that will not be built twice.

The Inevitable *Shift.*

Personal safety is a **\$12B market** built on a broken assumption. Campus security spends **\$18B**. Remote monitoring is **\$60B**.

None of it is autonomous.

*We are not entering a market.
We are replacing it with infrastructure.*

Every existing solution depends on a conscious, cognitively unimpaired human responding correctly in a moment of extreme threat. The market has spent forty years optimizing the wrong assumption. The opportunity is not to compete inside that frame — it is to dissolve it.

The Lie *That Kills.*

70%
freeze.

70% of assault victims freeze. Biology shuts down fine motor control. The amygdala overrides intent. The body becomes a witness, not a weapon.

Every device on the market — pepper spray, apps, panic buttons — assumes she has a free hand and a clear mind.

She has neither.

The industry sells the illusion of control while women pay the price. The solution is not a better tool that requires her to think. The solution is a tool that thinks for her, the moment her body cannot.

The Only Weapon That Works *While You Freeze.*

Valkyr is a biometric cuff that acts **before conscious thought**. Five-sensor fusion reads the body's fear signature — heart rate, skin response, temperature, motion, and ambient threat audio.

In 4 seconds. Zero touch.

Pulse Confirm

A haptic pulse on the wrist — she feels help moving before she can think to call it.

118 dB Directional Deterrent

Helmholtz acoustic chamber disorients the attacker's spatial awareness within a 4-meter cone.

GhostVoice

Decoy audio blasts from her phone — a fabricated incoming call from "Detective Rivera."

The Legion

Ultrasonic distress signals reach nearby cuffs. The network converges. She is never alone.

The Compounding *Defense*.

Every threat encounter becomes a **Shadow Token** — anonymized, encrypted, uploaded. The **FearPrint model** learns. A stalker pattern in Austin protects a woman in Chicago three weeks later.

*This is not a device.
It is a network that gets stronger every time someone
wears it.*

Hardware clones in **90 days**. Dataset clones in **18 months**. By then, the Legion owns the grid. Every competitor enters a market we already own at the protocol layer.

Metcalfe's Law, applied to human safety. Each new node makes every existing node more valuable. We are not selling a product — we are minting infrastructure.

The Fortress.

What €500K from EWOR converts into.

We do not *spend* this money. We convert it into compounding assets that cannot be replicated by capital alone.

01 **120-Woman Biometric Study**

Fitzpatrick I–VI skin types. The proprietary dataset moat. The model nobody else will own.

02 **25 Beta Units + 20-Unit Live Pilot**

Proof of architecture under real-world conditions. Hardened firmware. Validated five-sensor fusion.

03 **3 Provisional Patents**

Locked IP across the autonomous trigger logic, acoustic deterrent geometry, and Shadow Protocol consensus layer.

04 **Ironclad University SRA**

100% data ownership. No IP leakage. No shared rights. The dataset belongs to Valkyr in perpetuity.

05 **August LOI Pipeline**

300-unit institutional pre-commitment from housing partners. Revenue, locked, before Phase 2 opens.

The *Economics*.

We acquire subscribers through hardware. Housing complexes buy at **€99 landed cost**. We own the **€24.99/month Guardian subscription** for life.

INSTITUTIONAL CAC

€0

GUARDIAN LTV

€960

LTV : CAC

Infinite

The institution pays for the hardware. The user pays for the protection. We sit at the protocol layer collecting rent on safety infrastructure that compounds in value with every node added to the grid.

This is not a hardware business. It is a subscription network with a hardware moat.

The *Path*.

A five-year trajectory from fortress to grid. Each phase compounds the moat built in the previous.

YEAR	USERS	ARR	MILESTONE
01	1,000	\$242K	4 properties, proof of bundle
02	14,000	\$3.6M	National housing partnerships
03	52,000	\$12.1M	Proprietary monitoring center
04	100,000	\$24.1M	Urban Shadow Grid
05	250,000	\$56.8M	Strategic exit or Series C

Year 5 is not the end. Year 5 is the point at which the network cannot be unwound.

The *Offer*.

Raising €1M Seed.

Seeking **€500K lead from EWOR.**

PHASE 1

The Fortress

Builds the fortress. Locks the dataset, the IP, the institutional LOIs. Converts capital into permanent moats.

PHASE 2

The Legion

Collects the rent. 500-unit commercial run. 600 Guardians. €150K ARR. The Shadow Grid goes live.

Phase 1 builds the fortress.

Phase 2 collects the rent.

You don't invest in
gadgets.

*You invest in
infrastructure
that learns.*

In 18 months, the Shadow Grid will be live, the dataset will be 10x deeper, and the institutional pipeline will be locked. The only question is whether you own the first **250,000 nodes**, or you watch someone else do it.
